

Summer '26 Newsletter

Welcome to our Summer Newsletter!
As we move into the busiest season of the year, we're pleased to bring you the latest updates from **Washington Roofing & Insulation Inc.**

What's your go-to way to beat the summer heat?

- A. ice cream run
- B. the pool
- C. staying indoors
- D. my car's a/c

Don't forget SPF!

Skip **SPF** on a sunny day and you'll feel it pretty quickly; burns, damage, and inflammation to your skin. Your roof works in the same way.

Spray Polyurethane Foam (SPF) insulation, when paired with a protective top coat like silicone, urethane, or acrylic (which helps reflect UV rays), acts like a barrier for your roof. It helps protect against moisture and harsh UV exposure, adding years to your roof's life!

Benefits of SPF Roofing

Reflects
UV Rays

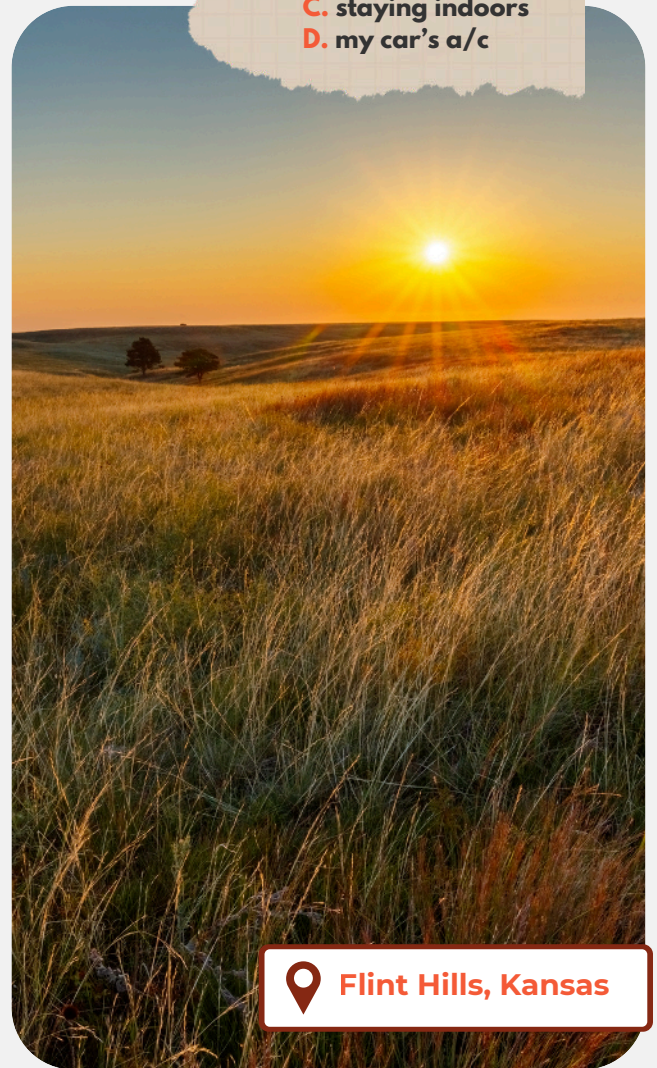

Improves

Protection

Extends
Roof Life

 **Flint Hills, Kansas**

Did You Know?

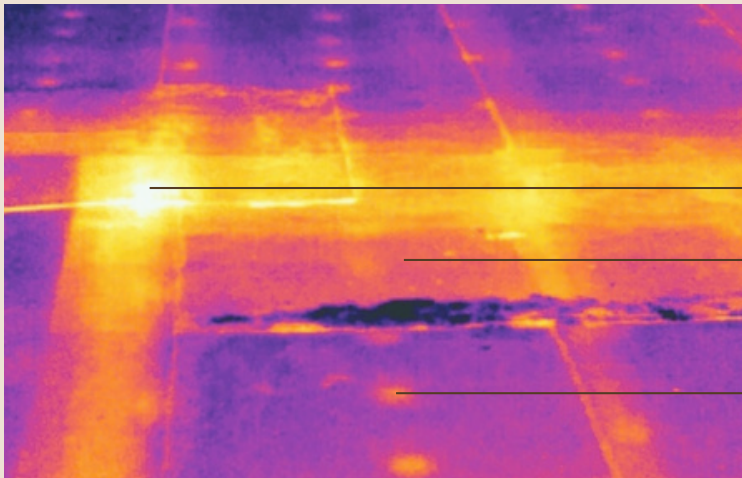

St. Francis, Kansas recorded the highest overall temperature in the Midwest in 2025 - reaching an astonishing **107°F!**

Sunrise or Sunset?

There aren't many better places to watch the sun go down than over our beautiful Flint Hills! Where is your favorite place to catch a summer sunset?

HEAT MAPS FOR LEAKS: INFRARED SCANNING 101

water-logging

potential moisture
beneath surface

thermal bridging
around bolt heads

Most commercial roof owners would like to be able to assess their roof's integrity without prodding and poking around within its structure. Infrared scanning is a way to observe the layers of your roof, from structure to insulation to waterproofing membrane, in order to find hidden moisture or heat loss that is otherwise not visible during a standard visual inspection.

- "Am I about to face a big repair bill?"
- "Why do I keep having damp spots?"
- "Why can't I keep my building cool?"

Calm your roof anxiety with an Infrared Scanning service from Washington Roofing. We find the hidden issues before they turn into costly repairs.
